The Research
Module 3
has plenty of
interesting
innovations
for you!

Chemical industry and collection waste processing platform

Sustainable textile supply chain,
reverse logistics, plastics
recycling - what are you
interested in?

Our researchers are converting:

- The logistic processes
- The way to select textile additives and dyes
- The non-recyclable plastic fraction
- The extrusion processes for plastics' mechanical recycling

What are they going to obtain?

- A reverse logistic process
 - Environmental sustainability data for textile chemicals
 - Porous carbons
 - New building blocks for polyesters and polyurethanes through systems Biocatalysis
 - Innovative extrusion processes against odours and contamination
- ▶ You can discover our results and products through reports and materials.
