***"Once you have known flight,
you will walk the earth looking
at the sky, for there you have
been and there you will long to
return."***

So wrote Leonardo Da Vinci,
author of the Codex on Flight
in the early 1500s, a work
preserved in the Royal Library of
Turin. From this vision originates
the AIRONE project, the
Politecnico di Torino's initiative
for Expo Osaka 2025, dedicated
to the evolution of air mobility.

The opening event of the
exhibition "Volare: dove i sogni
incontrano la tecnologia" /
"Flying: Where Dreams Meet
Technology" aims to introduce
visitors to Politecnico di Torino
as a research university with
a strong focus on aerospace
topics, and more broadly
as an international partner
for Japanese companies,
universities, and research
institutions in the field of
innovation, as reflected in

the talks accompanying the
exhibition.
Through a multimedia journey,
visitors will explore drones,
supersonic aircraft, and
sustainable technologies that
are transforming the sky into
a space for connection and
transport. The project also
showcases Italian research and
addresses global challenges,
with a focus on infrastructure,
innovation, and social cohesion.
